

To put multiple tabulations on fewer pages without page breaks.

The TABULATE Procedure

Example 9: Creating Multipage Tables

---

Procedure features: TABLE statement

ALL class variable

BOX=

CONDENSE

INDENT=

page expression

Data set: ENERGY

Formats: REGFMT., DIVFMT., and USETYPE.

---

This example creates a separate table for each region and one table for all regions. By default, PROC TABULATE creates each table on a separate page, but the CONDENSE option places them all on the same page.

---

Program

```
options nodate pageno=1 linesize=80 pagesize=60;

proc tabulate data=energy format=dollar12.;

  class region division type;

  var expenditures;

  table region='Region: ' all='All Regions',
  division all='All Divisions',
         type='Customer Base'*expenditures=' '*sum=' '
         / rts=25 box=_page_ condense indent=1;

  format region regfmt. division divfmt. type usetype.;

  title 'Energy Expenditures for Each Region and All Regions';
  title2 '(millions of dollars)';
run;
```
